### 2.3 Quality Improvement Approach

Quality improvement (QI) is a formal analysis of practice performance and efforts done in order to improve the performance of the project with the main objective of increasing its efficiency. The information shown here about QI models and tools has been extracted from [?] and [?]. A proper QI process requires of some basics to success. These basics are the following ones:

- Establish a culture of quality in the project: Creation of QI teams, QI meetings and QI goals.
- Determine and prioritize potential areas of improvement: Define, according to the acceptance criteria of the project, the main areas of improvement.
- Collect and analyse data: Determine the type of data to be collect and analyse it properly according to the project objectives.
- Communication of results: Quality improvements should be transparent to the stakeholders in order to keep them satisfy.

In this project the six-sigma working philosophy will be implemented in order to improve quality. The objective of this philosophy is to adjust the existing processes in order to improve the quality and minimizing variability by reducing defects and irregularities. The model related with six-sigma philosophy that will be used is DMAIC. This model includes the following steps:

- Define: Set the objective of the problem or the existent defect. In this project this definition will be done according to the acceptance criteria. The improvement of the quality plan is one of the objectives that will need to be taken into account.
- Measurement: Measures are needed in order to have values for the problem or defect. In this project the measurements according to the effectiveness of the quality plan are:
  - Number of iterations of a document to be approved.
  - Stakeholders satisfaction
  - Time needed to approve a document.
  - Number of defects detected by the quality department
- Analyse: Figure out the causes of the problem or defect and propose solutions.
- Improve: Implement the solution approved.
- Control: Control the implementation of the improvement, assure continuity and success.

### 3.5 Risk identification and assessment

Risk ID	Risk Statement	Probability	Impact			Score	Response
			Scope/Quality	Schedule	Cost		
Identifier	Description of the risk event or circumstance	Likelihood of occurrence				Probab. x Impact	Description of the planned response strategy to the risk event

Table 3.5.1: Risk identification and assessment

Risk ID	Revised Probability	Revised Impact			Revised Score	Owner	Response
		Scope/Quality	Schedule	Cost			
Identifier	Likelihood after the response strategy				Revised probability × Impact	Person who will manage the risk	Actions to be taken to address the risk

Table 3.5.2: Revised risk identification and assessment

### 3.6 Risk data sheet

<b>Risk-ID:</b> 1.1.	<b>Risk Description:</b> Detailed description of the risk					
<b>Status:</b> Open or Closed	<b>Risk Cause:</b> Description of the circumstances or drivers that are the source of the risk					
<b>Probability</b>	<b>Impact</b>			<b>Score</b>	<b>Responses</b>	
	<b>Scope/Quality</b>	<b>Schedule</b>	<b>Cost</b>			
Qualitative or quantitative	Qualitative or quantitative assessment of the impact on each objective			Probab. x Impact	Response strategies for the event. Use multiple strategies where appropriate	
<b>Revised Probability</b>	<b>Revised Impact</b>			<b>Revised Score</b>	<b>Owner</b>	<b>Actions</b>
	<b>Scope/Quality</b>	<b>Schedule</b>	<b>Cost</b>			
Qualitative or quantitative					Person who will manage the risk	Actions needed to implement responses
<b>Type of Effort:</b> Fixed amount of work.						
<b>Location of Performance:</b> Facilities of: HIRO

## 4 | Plan communication management

TEXT0

### 4.1 Participants roles and responsibilities

TEXT0

### 4.2 Communication process

[PONER UNA INTRODUCCION]

#### **Informal**

Informal communications consist of e-mail, conversations, or phone calls and serve to supplement and enhance formal communications. Due to the varied types and ad-hoc nature of informal communications, they are not discussed in this plan.

#### **Formal**

The DEOS-UD Project will engage in various types of formal communication. The general types and their purpose are described below as “Status Meetings” and “Status Reports”.

#### **Status Meetings**

There are five basic types of status meetings for the DEOS-UD Project:

Status meetings internal to the DEOS-UD business team to discuss assignments, activities, and to share information; Status meetings and reports between the DEOS-UD business team,

and the technical project team; Advisory Committee meetings with the project stakeholders, and project manager to review progress, risks, and issues; Status meetings and reports between the DEOS-UD project manager and the steering committee; and Status meetings and reports to stakeholders, such as oversight agencies.

### **Status Reports**

A variety of status reports will be produced during the project. The status reports will be produced on regular intervals to provide stakeholders project information on the status and progress of the DEOS-UD project. At a minimum the reports will contain:

- Project status on major activities
- Project schedule
- Budget and cost tracking
- Status of issues and risks
- Health status
- Status of action items, if applicable.
- Future or planned activities

The intent of the status reports is to inform stakeholders of the project's progress and keep them actively involved in the project. The information provided will contain enough detail to allow stakeholders to make informed decisions and maintain oversight of the project.

### **External Communication**

If applicable, indicate the types of external communications that may be necessary in this project.
